---

Don:

I got your message. There are no windows in the building. The total estimated square footage of asbestos roofing sealant is 33 sq ft (total). I would leave the dates in the document. Attached is the document. Could you please get that to DSHS asap?

Things we need to do:

1. Remove electrical connection to the building;
2. Remove shop lights from the building
3. Sheet metal roofing (dispose of as demo building debris – not sure it has to be dispose of as asbestos)
4. Sheet metal side panels and other misc metal (recycle) – lab tests showed non detect for PCBs
5. Wood structure – demo and place in box and then may have to test (quick turnaround)

Thanks
